

# Interventions Verses Accommodations

	Interventions	Accommodations
<b>What they are</b>	<p>Targeted instruction to improve a specific skill.</p> <p>Interventions are based on a child’s needs. They:</p> <ul style="list-style-type: none"> <li>• Supplement the general education program.</li> <li>• Use <u>evidence-based strategies</u> and techniques.</li> <li>• Help students improve a skill or learn to apply existing skills to new situations.</li> </ul>	<p>A change to teaching or testing that removes barriers and provides equal access to learning. <u>Unlike modifications, it does not change the curriculum.</u></p> <p>Academic expectations are not altered. For example, a student with writing issues might be allowed to say the answers for a test instead of writing them, but the end result of the work is equal to that of students without accommodations.</p>
<b>Circumstances in which they are used</b>	<p>Interventions are used to teach the skills kids need to improve a specific area of weakness. Once those skills are gained, interventions typically end.</p> <p>Those weaknesses could be deficits in academic skills, like reading or writing. But there are also interventions for behavior problems (PBIS) that help kids better manage self-regulation, or learn more appropriate ways to interact with other kids.</p>	<p>Students with an Individualized Education Plan (IEP) or a 504 Plan have formal accommodations included in their plans. They may or may not continue to get those supports throughout their school years.</p> <p>Struggling students who don’t have an IEP or a 504 plan may be able to get informal supports that enable them to show what they know.</p>
<b>What they should include</b>	<p>Interventions should include targeted assessments to measure the development of a child’s skills.</p> <p>Instruction should be planned carefully and provided regularly. It should include data collection (or progress monitoring) to track growth and help shape decisions about next steps.</p>	<p>Accommodations allow a child to get around a specific barrier or challenge. They should represent a change in one or more of the following:</p> <ul style="list-style-type: none"> <li>Presentation (the way information is presented)</li> <li>Response (the way assignments or tests are completed)</li> <li>Setting (where your child learns)</li> <li>Timing and scheduling (the time your child has to do the task)</li> </ul>

<p><b>Examples may include</b></p>	<p><b>A system of scaffolding showing kids that what they already know can help improve their understanding of a topic (“We’re going to read a story about dogs. Before we do, think about what you already know about dogs that may be useful as we read.”)</b></p> <p><b>Schoolwide PBIS programs that explicitly teach behavior that is acceptable in the school environment</b></p> <p><b>Other Examples</b>  <b>General education student: Marcia is in first grade. She struggles with basic math skills. Her school schedules an hour of small group instruction each day to help her catch up. Every week, the teacher checks on her progress.</b></p> <p><b>Special education student: Jeff is in fifth grade and has dyslexia. He receives 30 minutes of specialized reading instruction three times a week. Every month, his reading progress is monitored.</b></p>	<p><b>Preferred seating away from distractions</b></p> <p><b>Use of a formula sheet or number line for math tests</b></p> <p><b>Small group testing</b></p> <p><b>Extended time for assignments or tests</b></p> <p><b>An extra set of textbooks for home</b></p> <p><b>Audiobooks or text-to-speech technology</b></p> <p><b>The freedom to work or take a test in a different setting, such as a quiet room with few distractions</b></p>
